

HADI DWI ARDIANSYAH

Backend · Machine Learning Enthusiast

081232102502 | hadidwi2222@gmail.com | <https://www.linkedin.com/in/hadi-dwi-ardiansyah/> | <https://portofolio-hadi-dwi-ardiansyah.vercel.app/> | Jombang, East Java

PROFILE

Fresh graduate in Informatics passionate about backend engineering and end-to-end system design. Experienced in building RESTful APIs using Node.js, Go, and Java, with solid knowledge of authentication and authorization, relational databases, Redis caching, and asynchronous task processing. Complementary background in machine learning, including CNN-based image classification. Eager to contribute to meaningful technical challenges in a collaborative team.

EXPERIENCE

Machine Learning Cohort — Bangkit Academy 2024 (Google, GoTo, Traveloka) Feb 2024 – Jul 2024

- Collected and curated an image dataset to detect vegetable names and quality using machine learning techniques.
- Implemented CNN models with Transfer Learning in TensorFlow to classify vegetable images with high accuracy.
- Integrated the trained model into a Flask web application in collaboration with the Cloud Computing team.
- Successfully deployed the solution on GCP with measurable improvements in classification accuracy.

Intern — Front-End & Assets Management — Dinas Komunikasi dan Informasi Malang Aug 2024 – Oct 2024

- Processed and transformed raw Excel data into clean, analysis-ready CSV formats using Python.
- Queried and managed relational databases using SQL to extract and filter required information for the team.
- Updated and maintained front-end UI components of a Laravel web application, ensuring alignment with design specifications.

PROJECTS

Serba — Freelance Job Discovery Platform (Ongoing) | TypeScript · Express.js · PostgreSQL · Redis · BullMQ · Docker Compose · Resend · OAuth2.0 · Cloudinary

- Designed and implemented RESTful APIs with authentication/authorization, including OAuth2.0 Google sign-in.
- Design diagram UML.
- Integrated PostgreSQL for relational storage and Redis for caching and background job processing.
- Built an asynchronous notification pipeline using BullMQ (message queue) to handle email notifications via Resend and in-app notifications.
- Containerized the full application stack with Docker Compose for consistent dev and deployment environments.
- Use cloudinary to handle image.
- Implement OWASP top 10.

Go Online Shop — Dummy Project | Go · Fiber · Redis · MySQL · Docker

- Built a RESTful API using Go (Fiber) with Domain-Driven Design (DDD) architecture.
- Implemented JWT-based authentication and authorization (access & refresh tokens) and Redis caching.
- Wrote unit tests to ensure code reliability and API performance.

Spring Boot REST API — Dummy Project | Java · Spring Boot · MySQL

- Developed a REST API with full CRUD operations on each endpoint using Java and Spring Boot.
- Implemented Opaque Token authentication/authorization and unit testing.

Vegetable Quality Detection System — Bangkit Capstone | Python · TensorFlow · Flask

- Built a CNN model with Transfer Learning for vegetable image classification deployed via a Flask API on GCP.

EDUCATION

S1 Informatika — Universitas Muhammadiyah Malang

Graduated 2024

GPA: 3.90 / 4.00

- Relevant Coursework: Machine Learning, Database Systems, Data Structures & Algorithms, Statistics.
- Completed Basis Data course: foundational SQL, relational database design, and query optimization.

SKILLS

Languages	Python, Go, Java (OOP), JavaScript, TypeScript, SQL, HTML, CSS
Backend	REST API, Node.js, Express.js, Fiber (Go), Spring Boot, JWT Auth, BullMQ, Redis, Cloudinary, Resend, OWASP Top 10
Databases	MySQL, PostgreSQL, Redis
Tools & DevOps	Docker, Docker Compose, Postman, Jupyter Notebook, Google Colab
Machine Learning	TensorFlow, CNN, Transfer Learning, Image Classification, Dataset Curation
Soft Skills	Time Management, Effective Communication, Growth Mindset, Attention to Detail, Teamwork
